

EAB Workforce Readiness Platform

Embedding Work-Integrated Learning at Scale

Move from fragmented experiential learning to a fully embedded model where every student graduates with real, employer-relevant experience

Our solution is built on four core pillars:

Curriculum-Aligned Simulation Library

300+ employer-designed simulations are pre-mapped to courses and programs. Faculty can immediately integrate relevant, real-world experiences into existing curriculum without needing to source or update content.

Seamless LMS Integration

Simulations are embedded directly within the LMS, allowing students to complete work within their normal coursework environment. Faculty can easily assign, track participation, and incorporate simulations into grading workflows.

Reporting and Skills Visibility

Comprehensive dashboards provide visibility into student engagement and career interests. Track skills exposure through NACE-aligned competencies and gain clear, reportable evidence of workforce readiness.

Custom & Co-Branded Simulations

Create institution-specific or employer co-branded simulations tailored to strategic programs and partnerships. Align academic experiences with employer needs while strengthening career pathways and differentiation

1,000+ hours of work-related content

Zero lift for faculty adoption

Access to **real-time data** on skills, engagement, and workforce readiness

Students gain **2x increase** in understanding of real-world career roles

The future of career readiness is **embedded, scalable, and measurable.**
